What is animal extinction?

A species is extinct when the last existing member dies. Extinction therefore becomes a certainty when there are no surviving individuals that can reproduce and create a new generation. A species may become functionally extinct when only a handful of individuals survive, which cannot reproduce due to poor health.

< Back

Why is this a problem?

animal extinction

Animal or plant extinction is a problem because of the eco system. Whenever an animal or plant goes extinct it affects the rest of the food chain because the animal that fed off of it can no longer do that and that animal might go into extinction. Some plants or animals also serve a purpose like bees that pollinate flowers to help them grow. We use a lot of plants for medicine too so if they go extinct we can't make medicine with it anymore.

How could we fix this problem?

?

< Back

Habitat loss

animal extinction

Habitat loss poses the greatest threat to species. The world's forests, swamps, plains, lakes, and other habitats continue to disappear as they are harvested for human consumption and cleared to make way for agriculture, housing, roads, pipelines and the other hallmarks of industrial development.

Climate change | Forest loss

< Back

Climate change

animal extinction

The emerging driver of habitat loss is climate change. Wildlife that need the cool temperatures of high elevations, such as the American pika, may soon run out of habitat. Coastal wildlife may find their habitat underwater as sea levels rise.

< Back

Forest loss

animal extinction

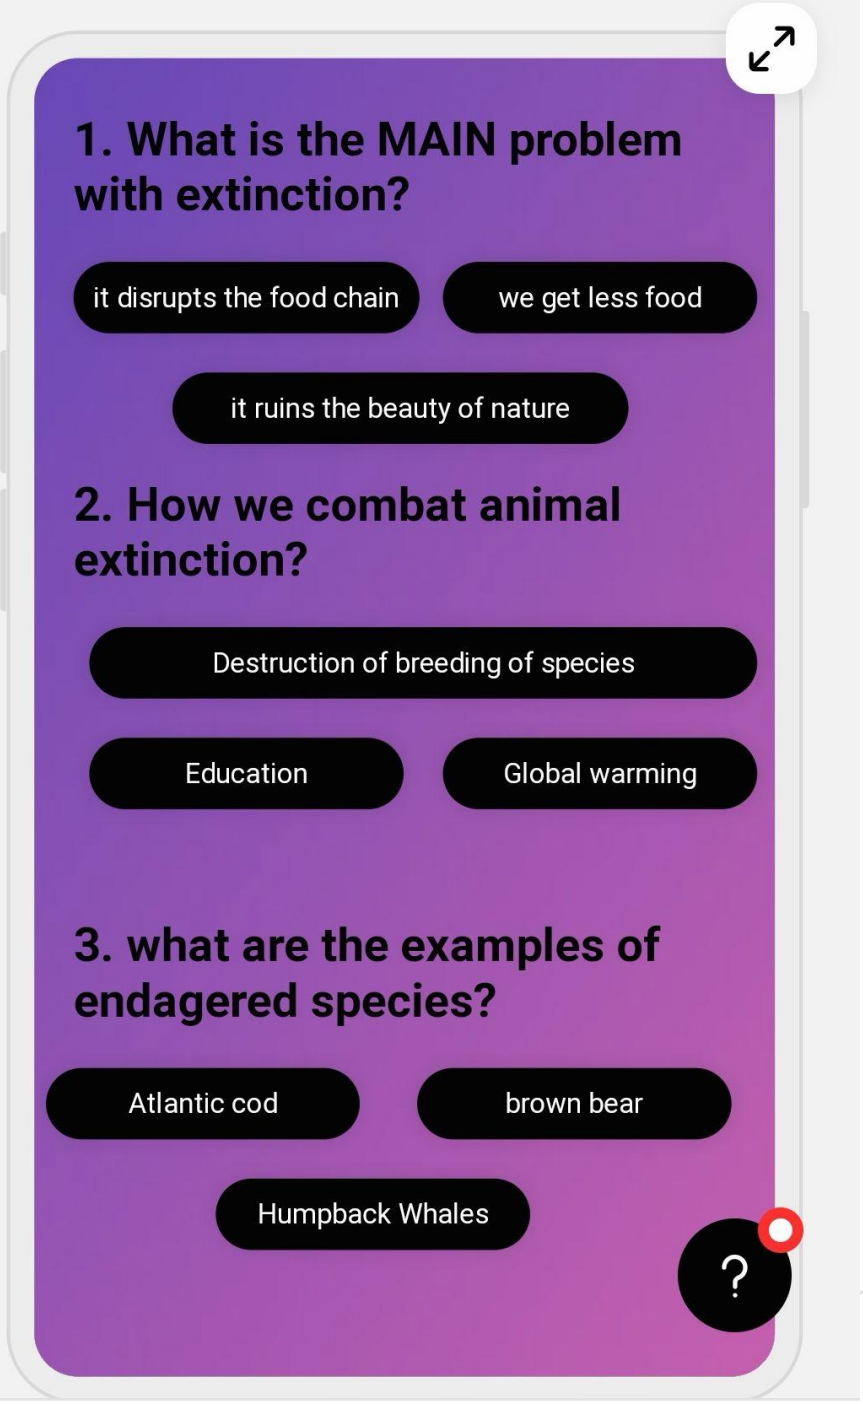
Forest loss and degradation is mostly caused by the expansion of agricultural land, intensive harvesting of timber, wood for fuel and other forest products, as well as overgrazing.

< Back

How could we fix this problem?

animal extinction

If you want to protect the endagered species first you might want to learn about the endagered species around you like the "Atlantic Cod" which is an endagered species in Lithuania. Second visit some kind of park that houses endagered animals cause they teach you about them and how to help some give a procentage of their profit to charities helping endagered animals. Third don't use herbacide or pesticides cause birds that feed off of pests can get poisoned by them. Fourth do not purchase products made from these endagered animals or species.



1. What is the MAIN problem with extinction?
it disrupts the food chain
we get less food
it ruins the beauty of nature
2. How we combat animal extinction?
Destruction of breeding of species
Education
Global warming
3. what are the examples of endagered species?
Atlantic cod
brown bear
Humpback Whales

Green Sharing

Green Sharing

- Green Sharing is an accessible app for renting eco-friendly appliances available for cooking, cleaning and gardening
- Our goal is to reduce the greenhouse emissions caused by over-producing non eco-friendly appliances
- It is entirely local, affordable and easy to use
- You can search for appliances in your town or surrounding areas

The sign up and login pages provide security for the users.

Gardening Tools

40€

A lawnmower is used to mow your lawn quickly.

Chat

250€

A tractor is used to carry crops, wood and other heavy stuff.

Chat

A woodchipper can reduce a pile of branches into small pieces of wood.

Chat

Here are the three categories we offer. You can select the one fitting your needs.

Cooking Tools

25€

An espresso machine to satisfy your caffeine cravings.

Chat

5€

Boil water quickly to make tea.

Chat

10€

A toaster for toasting bread to have with your breakfast.

Chat

Cleaning Tools

Robot vacuum cleaner, 3D obstacle avoidance, 240 min running time;
Price: 10 euros

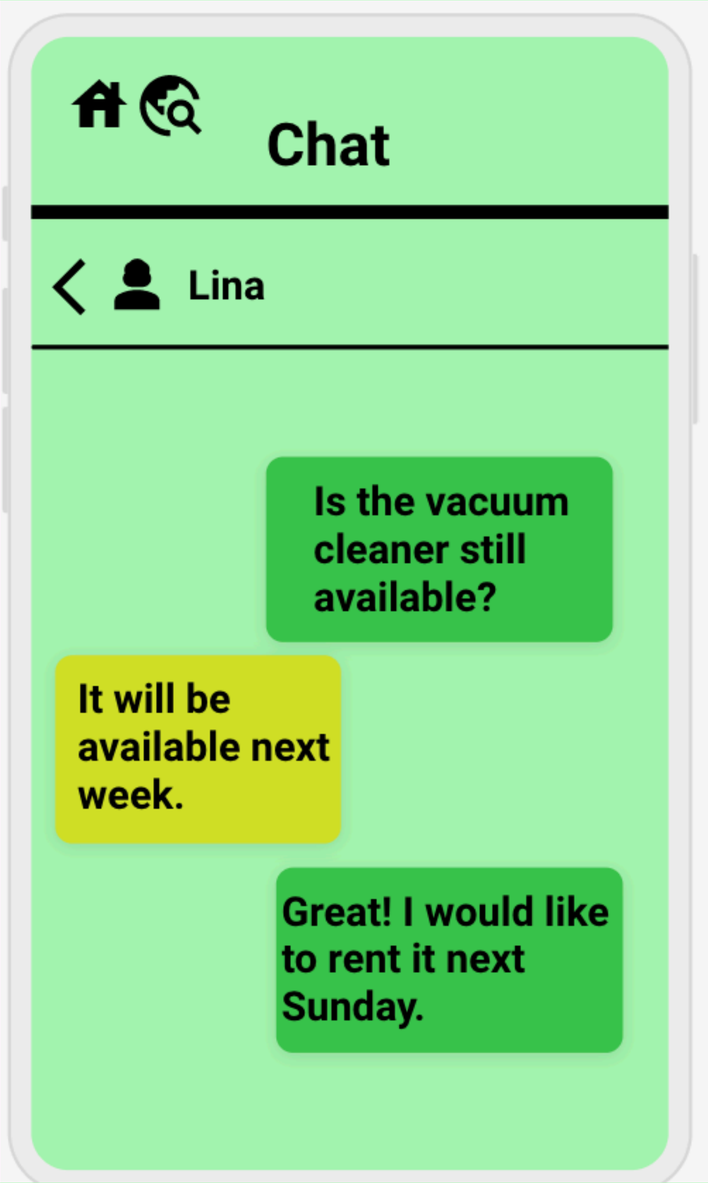
Chat

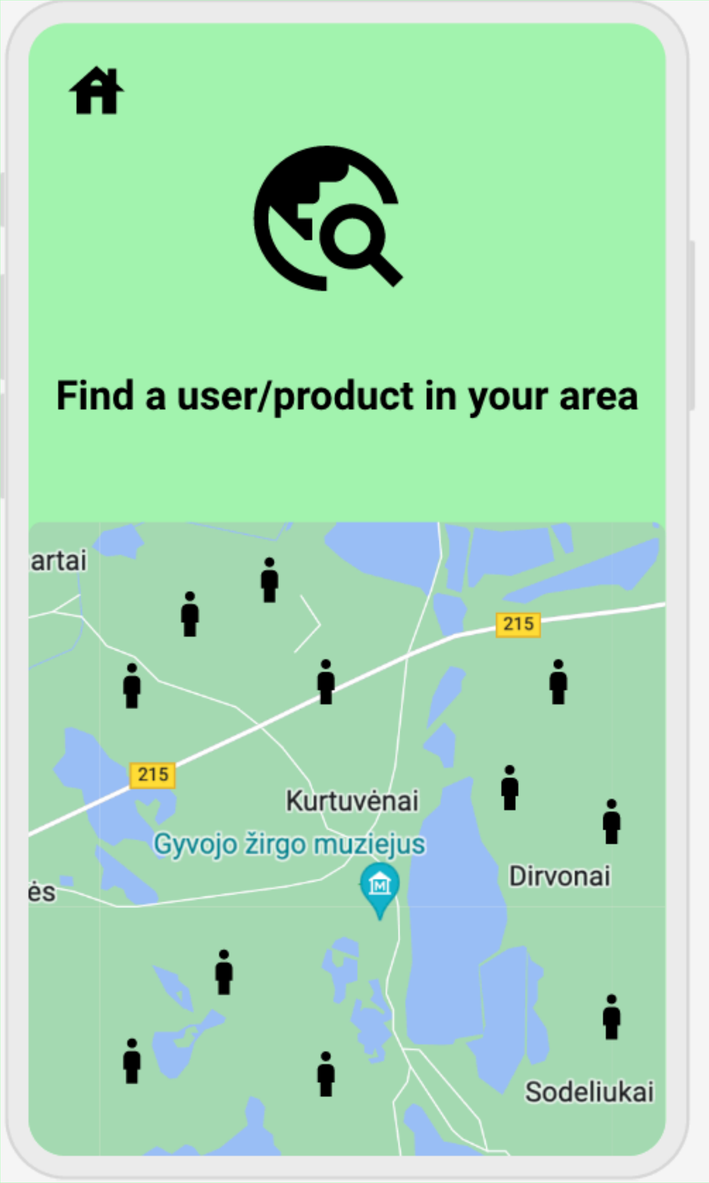
Electric Iron, generates steam, anti-burn control, water indicator;
Price: 5 euros

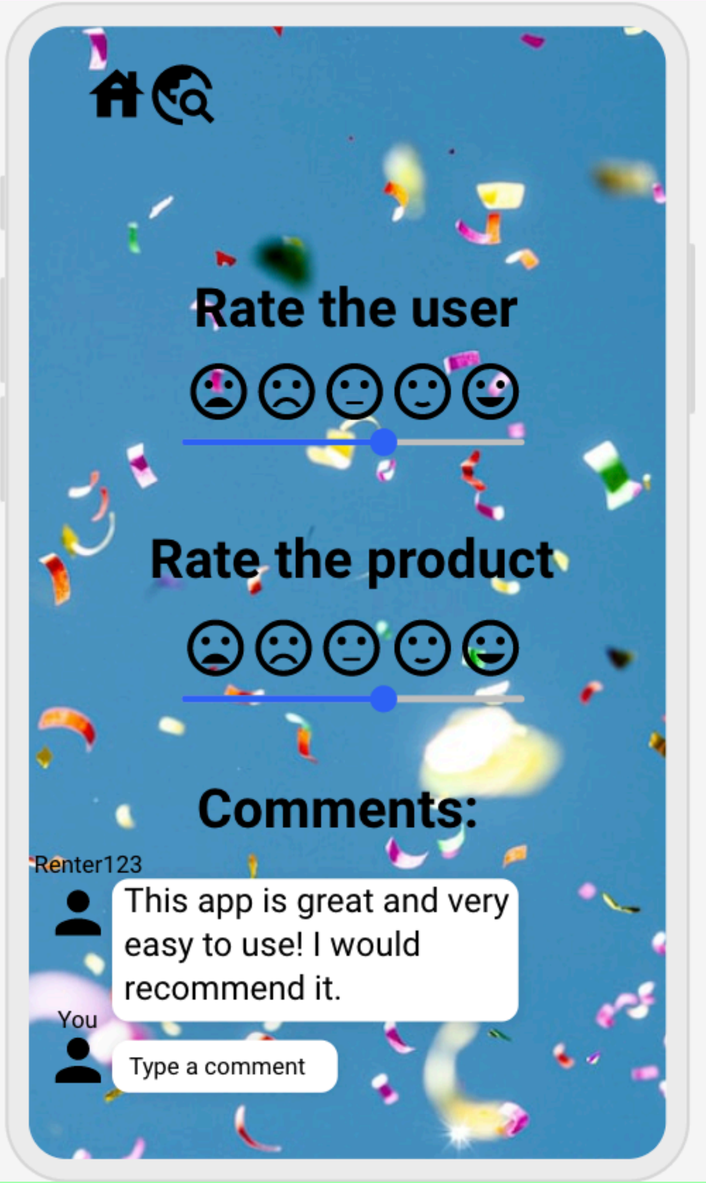
Chat

Cordless vacuum cleaner with long running time, 2 in 1 handheld device for multi-surface cleaning
Price: 7 euros

Chat







Our chat facilities communication, the map enables you to find users in your area and the rating and comment system provides better quality services.

Thank you for your time!

What does the SORT UP app do?

The app helps people to sort the garbage in the correct bins, so that everything that should be getting recycled is getting **recycled or reused** in the correct manner.

The user is directed to a **list of different materials and items**, the users **find** the item or material or **can scan** it if unknown.

The app tells the user how to **recycle** correctly their trash.

Additionally, it tells the user if their material can be **reused**. For example if they want to re-use their plastic bottle it gives them a list of example of what they can make with the material or if can be donated to a charity.

The App is **interactive** and allows to collect and share points on **Social Media**.

Your object is PLASTIC

How to dispose and recycle:
Rinse the object, it is important to recycle clean plastic
Insert in the object in the plastic recycle container or collect more plastic in a plastic bag and bring to the recycling station.

- A plastic bottle can be re used to make a bird feeder, egg yolk seperater, piggy bank or a pencil case.
- reuse plastic contaiers as storage and organizers
- Create a verytical garden
-

COLLECT YOUR BADGE AND SHARE WITH FRIENDS!!!

Your object is PAPER

To recycle paper you should put it in the paper bin, this is the same for cardboard. Make sure not to put cardboard and paper in the same bin.

These are some ways to re-use paper:
- Use newspaper as wrapping paper
- Use newspaper to clean windows
- Put on the floor while painting
- If it is printed paper then you can and not double sided you can use the other side for something such as drawing, sketching, doodling and oragimi.
- For books you can give to a charity such as the red cross or give them to a friend.

COLLECT YOUR BADGE AND SHARE WITH FRIENDS!!!
